

Hourly Room Booking Plugin

What the Plugin Does

We need a WordPress plugin to manage room bookings for a business with multiple rooms (starting with 7 rooms, but can add more). Users can book rooms directly from a room's page or through a search form. The plugin supports pricing, extras, extra people, payments (PayPal and on-site), and notifications (email, SMS, WhatsApp). Admins get a dashboard to manage everything.

Main Requirements

1. Rooms

- **What We Need:**
 - Add unlimited rooms (starting with 7).
 - Each room has:
 - Name (e.g., "Meeting Room 1")
 - Description (text about the room)
 - Image (one photo for the room)
 - Pricing (can be same for all or different per room)
- **How It Works:**
 - Admins add/edit/delete rooms in the WordPress admin panel.
 - Rooms are shown on their own pages (built with Elementor).

2. Booking Rules

- **What We Need:**
 - Minimum booking: 2 hours; Maximum: 12 hours.
 - 30-minute cooldown after each booking (e.g., 2-hour booking ends at 1:00 PM, next slot starts at 1:30 PM).

- Only one booking per room at a time (no overlaps).
- Admins can skip cooldown if needed (with a reason noted).
- **How It Works:**
 - System checks time slots to avoid overlaps and adds cooldown.
 - Users pick date, time, and duration when booking.

3. Pricing Rules

- **What We Need:**
 - Default pricing (same for all rooms unless changed):
 - 2 hours: €45
 - 3 hours: €50
 - 4 hours: €60
 - Each extra hour: +€10
 - Admins can set different prices for each room.
 - Extra people: €15 per person (max 10 extra people per booking).
 - Extras (e.g., Item 1: €10, Item 2: €20) with images, optional for users.
 - Bookings 4+ hours: PayPal only, full payment upfront, no refunds.
 - Bookings under 4 hours: PayPal or on-site payment.
 - PayPal payments include a 3% fee (added to total).
- **How It Works:**
 - Users see total price (hours + extras + extra people + PayPal fee if applicable) before confirming.
 - Admins set pricing in the admin panel.

4. Room Calendar

- **What We Need:**
 - Each room has its own calendar.

- Admins/staff see all booked and available slots.
- **How It Works:**
 - Calendar shows bookings and gaps (including cooldowns).
 - Built using a calendar tool (like FullCalendar.js) in the admin panel.

5. Notifications

- **What We Need:**
 - Send notifications to users and admins via:
 - Email
 - SMS
 - WhatsApp
 - User notifications:
 - Booking confirmation with details and a link to view booking.
 - Reminder 1 hour before booking.
 - Admin notifications:
 - New booking alerts with details.
 - Admins can customize notification text.
 - Every transaction sends an invoice to the user (via email).
- **How It Works:**
 - Use WordPress for emails, Twilio for SMS, and WhatsApp Business API for WhatsApp.
 - Invoices include booking details, total price, and PayPal fee (if any).

6. Extras and Extra People

- **What We Need:**
 - Extras (e.g., Item 1: €10, Item 2: €20) with images, optional for users.
 - Extra people: €15 per person, max 10 per booking.

- **How It Works:**

- Admins add/edit/delete extras in the admin panel.
- Users select extras and extra people during booking.
- Extras and extra people show in the price summary.

How Users Book Rooms

Option 1: Direct Room Booking

- **Steps:**

1. User visits a room's page (built with Elementor).
2. Room is already selected in the booking form.
3. User picks date, time, and duration (2–12 hours).
4. User selects extras (optional) and extra people (max 10).
5. User sees a summary (room, date, time, extras, extra people, total price).
6. User enters personal details (name, email/phone, optional signup with OTP verification).
7. User chooses payment:
 - PayPal (with 3% fee) or on-site for bookings under 4 hours.
 - PayPal only for bookings 4+ hours.
8. After booking, user gets a confirmation (email/SMS/WhatsApp) with a link to view booking details and an invoice.

- **How It Works:**

- Form is added to room pages using a shortcode (e.g., `[room_booking_form room_id="X"]`).
- Form is multi-step for clarity (date/time → extras → details → payment).

Option 2: Search Form Booking

- **Steps:**

1. User uses a search form to pick date, time, and duration.
 2. System shows available rooms for that time slot.
 3. User selects a room from the list.
 4. User selects extras (optional) and extra people (max 10).
 5. User sees a summary (room, date, time, extras, extra people, total price).
 6. User enters personal details (name, email/phone, optional signup with OTP verification).
 7. User chooses payment:
 - PayPal (with 3% fee) or on-site for bookings under 4 hours.
 - PayPal only for bookings 4+ hours.
 8. After booking, user gets a confirmation (email/SMS/WhatsApp) with a link to view booking details and an invoice.
- **How It Works:**
 - Form is added to any page using a shortcode (e.g., `[room_booking_search]`).
 - Form is multi-step (date/time → room selection → extras → details → payment).
 - Uses AJAX to show available rooms in real-time.

Admin Dashboard

- **What We Need:**
 - A complete dashboard for admins and staff (special role) to manage everything.
 - Features:
 - **Rooms:** Add/edit/delete rooms (name, description, image, pricing).
 - **Extras:** Add/edit/delete extras (name, price, image).
 - **Bookings:**
 - View all bookings (filter by room, date, status).

- Create new bookings manually.
- Edit bookings (change time, extras, or status).
- Delete bookings.
- Mark on-site payments as completed.
- Override cooldown periods (with a reason noted).
- **Settings:**
 - Set pricing rules (default or per room).
 - Customize notification text (email, SMS, WhatsApp).
 - Toggle notification types (e.g., turn off SMS for admins).
- **Reports:**
 - View total revenue (filter by room or date).
 - See booking data in graphs (e.g., bookings per day, revenue over time).
 - Export reports as CSV.
- **Access Control:**
 - Admins: Full access (manage rooms, extras, bookings, settings).
 - Staff: View-only access (see bookings and calendars, no edits).
- **Payment Management:**
 - View payment status (Paid via PayPal, Pending On-Site).
 - See PayPal fee (3%) for each transaction.
- **How It Works:**
 - Built as a custom admin menu in WordPress.
 - Use tables to show bookings and filters for easy searching.
 - Use graphs (e.g., Chart.js) for booking/revenue data.
 - Log admin actions (e.g., cooldown overrides, booking changes) for tracking.

Payment Options

- **Rules:**
 - Bookings under 4 hours: PayPal (with 3% fee) or on-site payment.
 - Bookings 4+ hours: PayPal only (with 3% fee), full payment upfront, no refunds.
 - Every transaction sends an invoice to the user (via email) with details (room, time, extras, extra people, PayPal fee, total).
- **How It Works:**
 - Use PayPal Checkout API for online payments.
 - Store payment status in the database.
 - Admins can mark on-site payments as completed.

Other Details

- **Currency:** Euros only.
- **Language:** Can be English now, But we need it in German
- **User Signup:**
 - Users can book as guests (provide name, email/phone).
 - Or sign up/login with email/phone (verified by OTP via SMS or email).
 - Booking details accessible via a unique URL in confirmation email.
- **Integration:**
 - Works with Elementor for room pages and forms.
 - No conflicts with popular WordPress plugins (e.g., Yoast SEO).

Technical Details

- **Integrations:**
 - PayPal Checkout API for payments.
 - Twilio for SMS and OTP.

- WhatsApp Business API for WhatsApp notifications.
- **Performance:**
 - Handle 100+ simultaneous bookings.
- **Security:**
 - Protect against hacks (sanitize inputs, use nonces).
 - Store user data (email/phone) securely.
